BIDS WANTED

The Board of Education of the Clearbrook-Gonvick Independent School District #2311 is accepting bids for the school year 2025-2026 for the following dairy products:

- ½ Pint 1% White Milk
- ½ Pint 1% Chocolate Milk
- ½ Pint Chocolate Skim Milk
- ½ Pint Lactose Free Milk

Successful Bidder must deliver to the Clearbrook-Gonvick School location twice per week.
Bid response should specify whether or not portable cooler units would be supplied at location.

Bids should be sent to: Clearbrook-Gonvick ISD #2311
Attention: MILK BID
16770 Clearwater Lake Rd.
Clearbrook, MN. 56634

Bids will be opened at 2 pm on Monday, July 21st, 2025 at the Clearbrook-Gonvick School.
The Clearbrook-Gonvick School Board reserves the right to reject any and all bids.

Clearbrook-Gonvick School District is accepting sealed bids for the following:

An 8x12 shed constructed by our shop class during the 24-25 school year.
THIS ITEM WILL BE SOLD AS IS. THE WINNING BIDDER WILL BE RESPONSIBLE FOR MOVING THE SHED. THE MINIMUM REQUIRED BID IS \$1,500.00.
Please see District web page for additional information and pictures.
Sealed bids are due in the District Office by 4:00 pm on Friday, June 27, 2025. Bids must contain the bidder’s name, address, and a phone number for daytime contact.
Bids will be opened at 9:00 am on Monday, June 30, 2025, in the district conference room at the address noted above. The winning bidder will be contacted after all bids have been opened. The district reserves the right to reject any and all bids.
Payment in full by cash, check or money order will be necessary before item is released. The winning bidder must pick up the shed by Friday, July 11, 2025. If the shed is not picked up by Friday, July 11, 2025, it will be offered to the second highest bidder. The same conditions for pick up will apply.
To request more information or schedule a viewing, please call 776-3112, and ask to speak with Virgil.
Please address your bid to

By general consent, the Board waived the three-day notice requirement for the following motion:
Land & Forestry – Motion by Commissioner Emmel, seconded by Commissioner Larson and carried, to hire the following individual to work at Long Lake Park for the Summer: Alibi Risland.
Adjourn- Motion by Commissioner Titera, seconded by Commissioner Larson and carried, to adjourn the meeting at 10:02 a.m.
Dated: June 17th, 2025
Lori Lewis,
Board Coordinator
Stuart Dukek,
Chairman

Independent School Dist. 2311
Clearbrook - Gonvick

– MMS Petterson/Walberg to approve agenda as presented. MCU.
4. Old Business
*Review Election Timelines – Election deadlines were discussed. Questions were asked & answered.
*Consider a Motion to Allow for the Submission of Information Required by MDE as Part of Their Review & Comment Process for a November 2025 Election – MMS Wittenberg/Abel to approve motion. Roll call Vote – Able-Yes, Bodensteiner-Yes, Petterson-Yes, Pond-Yes, Solee-Yes, Walberg-Yes, Wittenberg-Yes. MCU.
5. Future Meetings
*Regular School Board Meeting on Monday, June 16, 2025, at 7:00 p.m.
*Work Session on Monday, June 16, 2025, at 6:00 p.m.
6. Adjournment – MMS Walberg/Bodensteiner to adjourn at 7:39 p.m. MCU

DigiKey

More to offer

Discover your pathway to more. DigiKey currently has a wide range of available positions in a supportive and stable environment.

Benefits include:

- The region's best health plan
- Up to \$5,000 in combined sign-on/relocation bonuses
- Opportunities for career advancement
- Clean, climate-controlled workplace
- Free onsite clinic for employees and spouses
- 401(k) match & annual profit sharing
- Generous paid time off starting on day one

A secure job...top-tier benefits...genuine potential for growth.

This could be exactly what you’re looking for.

Find your more at **digikkeycareers.com**

©2025 DigiKey. DigiKey is an Equal Opportunity Employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability, or status as a protected veteran.

ISD #162 Current Job Openings

***Director of Community Education** position is open immediately. Position requires a BA/BS degree and Minnesota Community Education Director Licensure. Seeking a qualified and motivated individual, supervisory experience preferred, salary range \$64,000 to \$74,309. Comprehensive benefits package included. Please submit your resume, cover letter, references and proof of licensure.
***Speech and Language Pathologist** position opening for the 2025-2026 School Year. Proper Minnesota licensure is required. Starting salary with proper licensure: \$49,294 and follows the Teacher’s Master Agreement Salary Schedule. Comprehensive benefits package included. Please submit your resume, cover letter, references and proof of licensure.
***Substitute Teacher** opportunities are available. Applicants should submit their teaching license (or substitute licensure with a 4-year degree) and resume. Full day rate of pay is \$150. *Interested applicants should send a resume, teaching credentials, letter of interest, three letters of recommendation and a copy of college transcripts to Nichole M. Ekre at 202 Bagley Ave. NW, Bagley, MN 56621 or nekre@bagley.k12.mn.us.*

***Native American Home School Liaison** position openings. Candidates must be highly qualified, which includes either two or more years of college, an AA Degree, or the ability to pass the ParaPro Exam. Wages starting at \$16.48/hr.
***Paraeducator** position openings. Candidates must be highly qualified, which includes a High School Diploma or equivalent and either 2 or more years of college/an AA Degree, or the ability to pass the ParaPro Exam. Wages starting at \$16.48/hr.
***Substitute Para** opportunities are available. Candidates must be highly qualified, which includes a High School Diploma or equivalent and either 2 or more years of college/an AA Degree, or the ability to pass the ParaPro Exam. Wages starting at \$16.48/hr.
***Cook** position open for the upcoming 2025-2026 school year. Currently accepting applications for a 7hr Cook position. A high school diploma or GED is preferred but not required. Wages start at \$16.87/hr.
***Substitute Food Service Support Staff** - a high school diploma or GED is preferred but not required. Wages starting at \$15.46hr. *Application forms may be downloaded from the District Website bagley.k12.mn.us, picked up in the District Office or you may email nekre@bagley.k12.mn.us. For more information, please call Jennifer Hecht at 218-694-6184.*

***All successful candidates must pass a criminal background check. Positions will remain open until filled.**

Bagley Independent School District 162 does not discriminate on the basis of sex/gender, sexual orientation, race, color, creed, national origin, religion, disability, receipt of public assistance, marital status, or age in employment.

Bagley Public School is an Equal Opportunity Employer/Educator

Full-Time Route Bus Driver and Substitute Bus Driver Positions

*Applicants must have or be able to obtain a school bus driver’s license endorsement. The District is willing to help applicants obtain their school bus endorsement. New drivers will receive a \$200 stipend after six months of driving to help defray the cost of certification. For more information, please call Stuart Dukek at 218-694-6122. Wages start at \$27.81hr and drivers are paid for a minimum of 2 hours for the morning route and 2 hours for the afternoon route.

Clearbrook 2024 Drinking Water Report

Making Safe Drinking Water

Making Safe Drinking Water

Your drinking water comes from a groundwater source: two wells that are 185 feet deep, that draw water from the Quaternary Buried Artesian aquifer. Clearbrook works hard to provide you with safe and reliable drinking water that meets federal and state water quality requirements. The purpose of this report is to provide you with information on your drinking water and how to protect our precious water resources.

Contact Mark Snobl, Water Superintendent, at 218-766-9650 or mark.snobl@ci.clearbrook.mn.us if you have questions about Clearbrook’s drinking water. You can also ask for information about how you can take part in decisions that may affect water quality.

The U.S. Environmental Protection Agency sets safe drinking water standards. These standards limit the amounts of specific contaminants allowed in drinking water. This ensures that tap water is safe to drink for most people. The U.S. Food and Drug Administration regulates the amount of certain contaminants in bottled water. Bottled water must provide the same public health protection as public tap water.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency’s Safe Drinking Water Hotline at 1-800-426-4791.

Clearbrook Monitoring Results

This report contains our monitoring results from January 1 to December 31, 2024.

We work with the Minnesota Department of Health to test drinking water for more than 100 contaminants. It is not unusual to detect contaminants in small amounts. No water supply is ever completely free of contaminants. Drinking water standards protect Minnesotans from substances that may be harmful to their health.

Learn more by visiting the Minnesota Department of Health’s webpage Basics of Monitoring and testing of Drinking Water in Minnesota (<https://www.health.state.mn.us/communities/environment/water/factsheet/sampling.html>).

How to Read the Water Quality Data Tables

The tables below show the contaminants we found last year or the most recent time we sampled for that contaminant. They also show the levels of those contaminants and the Environmental Protection Agency’s limits. Substances that we tested for but did not find are not included in the tables.

We sample for some contaminants less than once a year because their levels in water are not expected to change from year to year. If we found any of these contaminants the last time we sampled for them, we included them in the tables below with the detection date.

We may have done additional monitoring for contaminants that are not included in the Safe Drinking Water Act. To request a copy of these results, call the Minnesota Department of Health at 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Some contaminants are monitored regularly throughout the year, and rolling (or moving) annual averages are used to manage compliance. Because of this averaging, there are times where the Range of Detected Test Results for the calendar year is lower than the Highest Average or Highest Single Test Result, because it occurred in the previous calendar year.

Drinking water comes from a groundwater source: two wells that are 185 feet deep, that draw water from the Quaternary Buried Artesian aquifer. Clearbrook works hard to provide you with safe and reliable drinking water that meets federal and state water quality requirements. The purpose of this report is to provide you with information on your drinking water and how to protect our precious water resources.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency’s Safe Drinking Water Hotline at 1-800-426-4791.

Monitoring Results – Regulated Substances

LEAD AND COPPER – Tested at customer taps.							
Contaminant (Date, if sampled in previous year)	EPA’s Ideal Goal (MCLG)	EPA’s Action Level	90% of Results Were Less Than	Number of Homes with High Levels	Range of Detected Test Results	Violation	Typical Sources
Lead (09/11/23)	0 ppb	90% of homes less than 15 ppb	3.69 ppb	0 out of 5	0 - 5.0 ppb	NO	Corrosion of household plumbing.
Copper (09/11/23)	0 ppm	90% of homes less than 1.3 ppm	0.29 ppm	0 out of 5	0 - 0.46 ppm	NO	Corrosion of household plumbing.

INORGANIC & ORGANIC CONTAMINANTS – Tested in drinking water.						
Contaminant (Date, if sampled in previous year)	EPA’s Ideal Goal (MCLG)	EPA’s Limit (MCL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources
Combined Radium	0 pCi/l	5 pCi/l	0.7 pCi/l	N/A	NO	Erosion of natural deposits.

CONTAMINANTS RELATED TO DISINFECTION – Tested in drinking water.						
Substance (Date, if sampled in previous year)	EPA’s Ideal Goal (MCLG or MRDLG)	EPA’s Limit (MCL or MRDL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources
Total Trihalomethanes (TTHMs) (2022)	N/A	80 ppb	6.4 ppb	N/A	NO	By-product of drinking water disinfection.
Total Haloacetic Acids (HAA) (2022)	N/A	60 ppb	7.5 ppb	N/A	NO	By-product of drinking water disinfection.
Total Chlorine	4.0 ppm	4.0 ppm	0.98 ppm	0.71 - 1.54 ppm	NO	Water additive used to control microbes.

Total HAA refers to HAAs

OTHER SUBSTANCES – Tested in drinking water.						
Substance (Date, if sampled in previous year)	EPA’s Ideal Goal (MCLG)	EPA’s Limit (MCL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources
Fluoride	4.0 ppm	4.0 ppm	0.72 ppm	0.62 - 0.64 ppm	NO	Erosion of natural deposits; Water additive to promote strong teeth.

UNREGULATED/EMERGING CONTAMINANTS – Tested in drinking water.			
Contaminant	Comparison Value	Highest Average Result or Highest Single Test Result	Range of Detected Test Results
Sulfate	500 ppm	27.4 ppm	N/A
Sodium*	20 ppm	12.9 ppm	N/A
Perfluorobutanesulfonate (PFBS) (2022)	100 ppt	0.36 ppt	0.00 - 0.37 ppt
Perfluorobutanoic acid (PFBA) (2023)	7000 ppt	0.59 ppt	0.00 - 0.59 ppt

* Note that home water softening can increase the level of sodium in your water.

impractical for a water system to meet (for example, large-scale treatment technology may not exist for a given contaminant). Sample data are listed along with comparison values in the table below; it is important to note that these comparison values are not enforceable.

Detection alone of a regulated or unregulated contaminant should not cause concern. The significance of a detection should be determined considering current health effects information. We are often still learning about the health effects, so this information can change over time.

A person drinking water with a contaminant at or below the comparison value would be at little to no risk for harmful health effects. If the level of a contaminant is above the comparison value, people of a certain age or with special health conditions-like a fetus, infants, children, elderly, and people with impaired immunity—may need to take extra precautions. We are notifying you of the unregulated/emerging contaminants we have detected as a public education opportunity.

Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether the Agency should consider regulating those contaminants in the future.

- More information is available on MDH’s A-Z List of Contaminants in Water (<https://www.health.state.mn.us/communities/environment/water/contaminants/index.html>)
- Fourth Unregulated Contaminant Monitoring Rule (UCMR 4) (<https://www.health.state.mn.us/communities/environment/water/com/ucmr4.html>)
- Fifth Unregulated Contaminant Monitoring Rule (<https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule>)
- EPA has developed a UCMR5 Program Overview Factsheet (<https://www.epa.gov/system/files/documents/2022-02/ucmr5-factsheet.pdf>) describing UCMR 5 analytical standards and standards.

In the past year, your drinking water may have tested for additional unregulated contaminants as part of the Fifth Unregulated Contaminant Monitoring Rule (<https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule>) and results are still being processed. The Unregulated Contaminant Monitoring Rule 5 (UCMR 5) Data finder allows people to easily search for, summarize, and download the available UCMR 5 analytical results (<https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule-data-finder>).

In early 2024, MDH released new comparison values for two PFAS compounds, PFOA and PFOS. MDH is still evaluating how to apply these comparison values to drinking water systems. Additionally, EPA released final MCLs for PFOA at 4.0 ppt, PFOS at 4.0 ppt, PFHxS at 10 ppt, HFPO-DA (Gen X) at 10 ppt, PFNA at 10 ppt, and a calculated Hazard Index at 1 (unitless) that will become enforceable April 26, 2029. Additional Information on PFAS system results is available at: Interactive Dashboard for PFAS Testing in Drinking Water - MN Dept. of Health <https://www.health.state.mn.us/communities/environment/water/pfasmap.html>

Some People Are More Vulnerable to Contaminants in Drinking Water

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. The developing fetus and therefore pregnant women may also be more vulnerable to contaminants in drinking water. These people or their caregivers should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Learn More about Your Drinking Water Drinking Water Sources

Groundwater supplies 75 percent of Minnesota’s drinking water, and found in aquifers beneath the surface of the land. Surface water supplies 25 percent of Minnesota’s drinking water, and is the water in lakes, rivers, and streams above the surface of the land..

Contaminants can get in drinking water sources from the natural environment and from people’s daily activities. There are five main types of contaminants in drinking water sources.

- Microbial contaminants**, such as viruses, bacteria, and parasites. Sources include sewage treatment plants, septic systems, agricultural livestock operations, pets, and wildlife.
- Inorganic contaminants** include salts and metals from natural sources (e.g. rock and soil), oil and gas production, mining and farming operations, urban stormwater runoff, and wastewater discharges.
- Pesticides and herbicides** are chemicals used to reduce or kill unwanted plants and pests. Sources include agriculture, urban stormwater runoff, and commercial and residential properties.
- Organic chemical contaminants** include synthetic and volatile organic compounds. Sources include industrial processes and petroleum production, gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants** such as radium, thorium, and uranium isotopes come from natural sources (e.g. radon gas from soils and rock), mining operations, and oil and gas production.

The Minnesota Department of Health provides information about your drinking water source(s) in a source water assessment, including:

- How Clearbrook is protecting your drinking water source(s);
- Nearby threats to your drinking water sources;
- How easily water and pollution can move from the surface of the land into drinking water sources, based on natural geology and the way wells are constructed.

Find your source water assessment at Source Water Assessments (<https://www.health.state.mn.us/communities/environment/water/swp/swa>) or call 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Lead in Drinking Water

You may be in contact with lead through paint, water, dust, soil, food, hobbies, or your job. Coming in contact with lead can cause serious health problems for everyone. There is no safe level of lead. Babies, children under six years, and pregnant women are at the highest risk.

Lead is rarely in a drinking water source, but it can get in your drinking water as it passes through

lead service lines and your household plumbing system. Clearbrook is responsible for providing high quality drinking water, but it cannot control the plumbing materials used in private buildings.

Read below to learn how you can protect yourself from lead in drinking water.

1. **Let the water run** before drinking tap water flush your pipes for several minutes by running your tap. If you have a lead service line, you may need to let the water run longer. A service line is the underground pipe that brings water from the main water pipe under the street to your home.
- Activities such as taking a shower, doing laundry or dishes help keep water moving in your home system but are not a replacement for running the tap before you drink if it has not been used for a long period of time.
- The only way to know if lead has been reduced by letting it run is to check with a test. If letting the water run does not reduce lead, consider other options to reduce your exposure.
2. **Know your service line materials** by contacting your public water system, or you can search for your address online at the Minnesota Lead Inventory Tracking Tool (<https://maps.umn.edu/LSL/>).
- Protect Your Tap: a quick check for lead (<https://www.epa.gov/ground-water-and-drinking-water/protect-your-tap-quick-check-lead>) is EPA’s step by step guide to learn how to find lead pipes in your home.
3. **Use cold water** for drinking, making food, and making baby formula. Hot water releases more lead from pipes than cold water.
4. **Test your water.** In most cases, letting the water run and using cold water for drinking and cooking should keep lead levels low in your drinking water. If you are still concerned about lead, arrange with a laboratory to test your tap water. Testing your water is important if young children or pregnant women drink your tap water.
- Contact a Minnesota Department of Health accredited laboratory to get a sample container and instructions on how to submit a sample: Environmental Laboratory Accreditation Program (<https://eldo.web.health.state.mn.us/public/accreditedlabs/labsearch.seam>) The Minnesota Department of Health can help you understand your test results.
5. **Treat your water** if a test shows your water has high levels of lead after you let the water run. You can use a filter certified with ANSI/ NSF standards 53 and 42 for lead reduction.
- Read about water treatment units: Point-of-Use Water Treatment Units for Lead Reduction (<https://www.health.state.mn.us/communities/environment/water/factsheet/poulead.html>)

Information on lead in drinking water, testing methods, and other steps you can take to minimize exposure are available at:

- Visit EPA Basic Information about Lead in Drinking Water (<http://www.epa.gov/safewater/lead>)
- Visit the Minnesota department of Health Lead in Drinking Water (<https://www.health.state.mn.us/communities/environment/water/contaminants/lead.html>)
- To learn about how to reduce your contact with lead from sources other than your drinking water, visit Lead Poisoning Prevention: Common Sources (<https://www.health.state.mn.us/communities/environment/lead/fs/common.html>)
- 6. **Be Aware:** Head Start Programs, Child Care Centers, Public and Charter Schools all have requirements to test for lead in drinking water. These programs can learn more about requirements and resources for testing and remediation at MDH Drinking Water in Schools and Child Cares (<https://www.web.health.state.mn.us/communities/environment/water/schools/index.html>)
- 7.

Service Line Material Inventory

Clearbrook has completed and submitted our service line materials inventory to the Minnesota Department of Health. The service line inventory is publicly available, and you can check the materials for your service line by visiting the Lead Inventory Tracking Tool (LITT) (<https://maps.umn.edu/LSL/>). You may also contact us at <Insert Contact Information>. To complete the service line inventory, our system <insert a general description of how the system determined the status of service lines>. As of 10/07/2024, our inventory contains 0 lead, 1 galvanized requiring replacement, 233 unknown material, and 59 non-lead service lines.

Home Water Treatment Overview

Most Minnesotans, whether they drink from a public water supply or a private well, have drinking water that does not need treatment for health protection. Water treatment units are best for improving the physical qualities of water—the taste, color, or odor.

No single treatment process can remove all substances in water. If you decide to install a home water treatment unit, choose a unit certified and labeled to reduce or remove the substance of concern. If there is more than one substance you want to remove from your water, you may need to combine several treatment processes into one system.

Even well-designed treatments systems can fail. You should continue to test your drinking water after you install a treatment unit. All home water treatment units need regular maintenance to work correctly. Regular maintenance may include changing filters, disinfecting the unit, or cleaning scale buildup. Always install, clean, and maintain a treatment unit according to the manufacturer’s recommendations.

Learn more at Home Water Treatment (<https://www.health.state.mn.us/communities/environment/water/factsheet/hometreatment.html>).

Beware of Water Treatment Scams

False claims, deceptive sales pitches, or scare tactics have been used by some water treatment companies. Every person has a right to decide what is best for themselves and their family, and you may choose to install additional water treatment to further lower the levels of contaminants of emerging concern, chlorine, and other chemicals in your water. However, you should be cautious about purchasing a water treatment system. If you are considering the purchase of a home water treatment system, please read the Minnesota Department of Health’s recommendations online at Warning: Beware of Water Treatment Scams (<https://www.health.state.mn.us/communities/environment/water/factsheet/beware.html>).
